### **ZeroEyes Secures \$1.77M IDIQ Contract with the U.S. Department of Defense**

*Through this contract, ZeroEyes will provide AI-powered weapons detection technology and strengthen force protection capabilities*

**PHILADELPHIA, PA (August 14, 2020)** [ZeroEyes](#), an artificial intelligence weapons detection platform, today announced it secured a 12-month contract award of \$1.77 million that will allow the company to provide their AI-powered weapons detection solution to the U.S. Department of Defense (DoD) Joint Artificial Intelligence Center (JAIC) to strengthen force protection capabilities in deployed environments.

ZeroEyes' software integrates with an organization's existing camera systems and video analytics to detect weapons in real time. As soon as a visible weapon is detected, an alert with the image of the weapon goes to the ZeroEyes monitoring team. Once confirmed, an alert is sent to a local emergency dispatch, onsite security staff, police and school administrators via mobile and desktop.

"We're excited to help support increased technological capabilities for the DoD's efforts in warfighter environments," shared Dustin Kisling, senior director for government and commercial solutions. "ZeroEyes' technology will greatly underscore the DoD's efforts to enhance their existing force protection capabilities, while also operationalizing AI into their existing programs."

ZeroEyes is the nation's leading venture-backed video analytics company that uses artificial intelligence coupled with existing surveillance cameras to detect visible weapons and send real-time alerts. Founded by former Navy SEALs and military veterans with over 50 years of military experience, its mission is to detect weapons before shots are fired, enable faster response times for first responders and security personnel, and ultimately end mass shootings.

###

#### **About ZeroEyes**

ZeroEyes is an AI weapons detection platform that helps identify threats at first sight, integrating with existing IP security cameras to play one component of its overall security process, and provide security personnel and first responders with real-time information needed to keep people safe. ZeroEyes' solution was developed using thousands of proprietary images and videos captured to train its AI weapons detection model, giving it the most comprehensive and superior technology in the market. Founded by a team of Navy SEALs and military veterans with
